

Dashboard Sharing for Sugar®

Easily create custom dashboards and seamlessly share them with individual users, teams, and user groups with this powerful new integration from Intelstream.

CRM administrators can roll out new dashboards to any user or group, and update existing dashboards with new dashlets with just a few clicks. Designed from the ground up to be fully compatible with the latest version of Sugar®, Dashboard Deployer is an essential tool for keeping users and teams on the same page.

The screenshot shows the 'Intelstream Dashboards Deployer' interface. At the top, there's a navigation bar with various CRM modules like Contracts, Projects, Accounts, etc. Below that, a search bar is labeled 'Search users'. A table lists users with columns for Full Name, User Name, Title, Department, Email Address, and Office Phone. The table contains entries for 'admin Administrator', 'Will Westin', 'Sarah Smith', and 'Max Jensen'. Below the user list, there's a section titled 'User's dashboards' with a table showing deployment options for different modules like Accounts, Leads, and Leads.

Features & Benefits

Create and Share

CRM administrators can create new dashboards for any combination of users, user roles, and team assignments. These dashboards can then be shared instantly.

Seamless Deployment

Our Dashboard Deployer is simple to install, intuitive to use, and easy to update.

Fully Compatible

Easily integrate Dashboard Deployer with your existing customizations and plugins. Share specialized dashlets across your entire CRM instance.

Designed for Sugar®

Created with the newest version of Sugar® in mind, Dashboard Deployer is built to take full advantage of the software's latest updates.

Support You Can Count On

Designed and maintained by Intelstream, Dashboard Deployer is backed by one of the best support teams in the Sugar® community.
